AI Visibility

2/3 of score

76

Warning

SEO Visibility

1/3 of score

Key Findings

- Crawler Access: All files present -- no penalty
- AI Visibility: 3 pass, 5 warn, 0 fail (avg 66/100)
- SEO Visibility: 3 pass, 1 warn, 1 fail (avg 76/100)

1. Crawl Access

Penalty-based: each missing file deducts 10 points from the overall score.

AI Access File (LLMs.txt)	PRESENT
Sitemap	PRESENT
Robots.txt	PRESENT

2. AI Visibility Fundamentals

2/3 of score - 8 metrics - equal-weighted

Content Clarity	85/100	PASS
-----------------	--------	------

Analysis: Content is easy to read with appropriate sentence length and word choice.

Recommendation: Continue writing clear, accessible content.

Action Items:

- Keep sentences under 20 words on average.
- Use simple words when possible.
- Break long paragraphs into shorter ones.
- Add bullet points for lists.
- Read content aloud to check flow.

Semantic Structure

68/100

WARNING

Analysis: Clear homepage hierarchy with headings, calls to action, and section labels, but much of the content is fragmented by navigation and form elements rather than explanatory sections.

Recommendation: Put the article title in H1 tag, sub-headings in H2 tags, with clear structure.

Action Items:

- Wrap the headline in an H1 tag at the top.
- Use H2 tags for each section.
- Add the publish date in a time tag.
- Keep non-content elements minimal.
- Check page with an HTML validator.

Informational Depth

41/100

WARNING

Analysis: The page provides high-level promotional information but little substantive detail about curriculum, facilities, admissions criteria, academic outcomes, or policies.

Recommendation: Ensure content loads before cookie banners and provides substantive information.

Action Items:

- Move cookie banners so they appear after article text.
- Add a short summary of the article at the top of the page.
- Include the headline and author name in the HTML that loads first.
- Test the page in private mode to see if content appears.
- Ensure main content is not blocked by overlays.

Machine Readability

62/100

WARNING

Analysis: Text is mostly readable by machines, but there is heavy reliance on images, duplicated assets, and UI clutter. Some content appears truncated, which limits reliable parsing.

Recommendation: Use plain language that both AI and readers can understand.

Action Items:

- Replace jargon with simple words.
- Use everyday terms instead of technical phrases.
- Keep sentences under 20 words.

- Add FAQ pages explaining terms.
- Read text aloud—rewrite if it sounds stiff.

Query Match Potential**80/100****PASS**

Analysis: Strong alignment with common search intents for CBSE schools in Thane West, admissions, class levels, and contact details. Good for local and admissions-related queries.

Recommendation: Let the first paragraph load without barriers so AI can understand the topic.

Action Items:

- Show at least the first 100 words before any banners.
- Add a short meta description summarizing the content.
- Include the main keyword in the first sentence.
- Use friendly URLs instead of numbers.
- Share content on social media to help AI find it.

Topical Completeness**58/100****WARNING**

Analysis: It covers the basics expected for a school homepage, but important informational areas such as fee structure, faculty, transportation, academic programs, and parent resources are not visible in the provided content.

Recommendation: Add labels indicating content type (News, Opinion, Review).

Action Items:

- Pick one content type for each article and display it.
- Add a one-line summary explaining importance.
- Link to related content for background.
- Include reading-time estimates.
- Add glossary for technical terms.

Key Fact Extractability**74/100****PASS**

Analysis: Core facts are easy to extract, including school name, CBSE affiliation, location, contact numbers, campus size, establishment year, and admissions status.

Recommendation: Add info boxes with who, what, when, where, and why.

Action Items:

- Write sentences answering the 5 Ws.
- Bold names of people and companies.
- List key numbers or dates in bullet points.
- Keep key info free of barriers.
- Update info if details change.

Information Architecture**63/100****WARNING**

Analysis: Navigation links and section groupings are present, but the structure is more conversion-focused than information-focused, with limited clear organization of deeper content.

Recommendation: Add a simple navigation bar and topic labels so AI can see how content is grouped.

Action Items:

- List main topics in a top menu on every page.
- Give each article topic tags.
- Add a Related Stories box under each article.
- Use consistent tags across all content.
- Create a simple site map page listing every section.

3. SEO Visibility Fundamentals

1/3 of score - 5 metrics - equal-weighted

Accessibility	100/100	PASS
---------------	---------	------

Analysis: Images have descriptions, and tools for the visually impaired can read your pages well.

Recommendation: Keep adding short, helpful text for every image and test with a screen-reader once in a while.

Action Items:

- Add descriptive alt text to all images.
- Use ARIA labels for interactive elements.
- Ensure proper color contrast ratios.
- Make all functionality keyboard accessible.
- Test with screen readers periodically.

Section Labeling	29/100	FAIL
------------------	--------	------

Analysis: Parts of your pages use generic labels, so AI tools have to guess what's an article, menu, or footer.

Recommendation: Use clear, built-in labels like 'article,' 'navigation,' or 'footer' so software instantly knows what each chunk is.

Action Items:

- Wrap main content in <article> or <main> tags.
- Use <nav> for navigation menus.
- Add <header> and <footer> for page sections.
- Use <section> for thematic groupings.
- Replace generic <div>s with semantic alternatives.

Content Originality	100/100	PASS
----------------------------	----------------	-------------

Analysis: Substantial content suggests originality.

Recommendation: Ensure original, unique content.

Action Items:

- Add original facts or quotes.
- Avoid copying text.
- Use original images.
- Include expert interviews.
- Check for duplicate content.

SERP Preview Quality	50/100	WARNING
-----------------------------	---------------	----------------

Analysis: Missing or suboptimal meta title and/or description.

Recommendation: Add compelling meta titles and descriptions to every page.

Action Items:

- Keep title tags between 30-60 characters.
- Write meta descriptions between 70-155 characters.
- Include primary keywords naturally.
- Make each page's metadata unique.
- Write for humans first, then optimize for search.

Title & Heading Quality	100/100	PASS
------------------------------------	----------------	-------------

Analysis: Your page titles and subtitles are neat and logical—perfect for both readers and AI tools.

Recommendation: Keep using one main title followed by clear, numbered sub-headings.

Action Items:

- Ensure only one H1 tag exists per page.
- Use H2 tags for major sections.
- Use H3 tags for subsections within H2s.
- Avoid skipping heading levels (H1 to H3).
- Make headings descriptive and keyword-rich.
